PROFESSIONAL SUMMARY

Software engineer with experience in C#/.NET, React, TypeScript, and Azure, integrating AI agents into daily development workflows to enhance my debugging, documenting and coding skills. I combine hands-on engineering with AI-assisted problem-solving to supercharge my ability to deliver battle tested, production ready code at scale. Experienced in cloud services, reusable UI components, CI/CD pipelines, and modernizing legacy applications using agentic workflows.

TECHNICAL SKILLS

Languages: C#, TypeScript, Python, SQL, PHP

Web & APIs: .NET, React, Next.js, React Native, WordPress, REST APIs, GraphQL, gRPC, tRPC

Cloud & DevOps: Microsoft Azure, Azure DevOps, Docker, Kubernetes, Azure Container Instances, Git, Team Foundation Server (TFS), CI/CD, build pipelines

Engineering: Microservices, testing, debugging, npm, command-line tools, Agile, technical documentation, web analytics, SEO

AI: AI agents, agent orchestration, retrieval-augmented generation (RAG), AI safety, OpenClaw, ChatGpt, Claude.

PROFESSIONAL EXPERIENCE

Aegis Software Corporation
Software Engineer - R&D | Jan 2023 - Dec 2025

- Designed and implemented Azure-based microservices to deliver legacy manufacturing logistics software through scalable cloud services.
- Developed REST APIs and backend services in C#, alongside React/TypeScript web applications, for customer-facing SaaS products and an internal platform for managing client Azure Container Instances.
- Launched a production-ready React/TypeScript component library to standardize UI/UX and support faster development across teams modernizing legacy applications.
- Built data processing pipelines for a web analytics platform supporting product decisions and real-time monitoring of customer Azure Kubernetes environments.
- Led the team's migration from TFS to Git, establishing branching strategies and CI/CD pipelines that paved the way for broader repository migration.
- Used Docker and Azure DevOps daily to streamline Agile development workflows and improve deployment consistency through CI/CD pipelines.

Brand Enchanting Media
Frontend Web Developer | Sep 2021 - Jan 2023

- Built a multi-page marketing website with CRM functionality and a leads portal; developed non-WordPress projects using Next.js.
- Updated WordPress/PHP codebases for long-standing clients and maintained email automation and templates to support audience engagement.
- Built internal WordPress admin tools and dashboards to streamline content management and reduce manual operations.
- Collaborated with designers and stakeholders to translate requirements into implementation tasks, prepare project scopes, and communicate estimates and technical tradeoffs.
- Wrote technical documentation and runbooks for site maintenance, content publishing, and deployment to support project handoffs.

EDUCATION

Rutgers University
Bachelor's Degree in Business Administration
